

GEMINI

► The GEMINI is based on the principle of creating the very best in the design of small yet sonically accurate loudspeaker systems. Such an idea is of special interest to audiophiles. The Dynaudio 15 W-75 possesses almost unbelievable qualities for a driver of such a small size, particularly if it is used in a cabinet that designed to enhance its remarkable performance capability.

To increase the dynamic range and efficiency of the 15 W-75, the GEMINI system uses two of these woofers. It represents Dynaudio's first kit system incorporating the 15 W-75.

In combination with the ESOTEC D-260, also one of Dynaudio's latest driver designs, the speaker arrangement in the GEMINI follows concepts recognized and developed by the American designer, Joseph D'Appolito. It is a design with integrity, the GEMINI is capable of precisely fulfilling the basic conditions of D'Appolito theory.
