

CONSISTENCY IN KIT BUILDING.

ARIES

► With the launch of the Aries Dynaudio offers another attractive floor standing construction. The entire project is concentrating on the core purpose renouncing all frills and offering an unpretentious design. Drivers, cabinet and crossover are tuned consequently.

So many systems are aiming to impress the listener just with effects at the first listening. But listening to those for a longer period leaves one boring, cumbersome and strained.

The Aries is different. The sound is more unobtrusive and with time Aries shows the ability to reproduce music precisely but naturally with all details.

The cabinet proportions allow a harmonic integration into the living room environment. The beauty of the surface is up to the hobbyist's taste and skill.

It is recommended to observe the quality of the amplifier especially as the Aries is able to treasure the quality of even the best.
