

The Tweeter.

► The Focus construction utilizes the tweeter type D-28/2. It is the latest redesigned version of the most successful soft dome tweeter over the last decade found in many high end brands all over the world.

An improved internal damping and redesigned suspension and centering have even improved the musicality of this legendary tweeter. A very low resonance, additionally damped with a Dynaudio formula liquid damping, creates an ideal crossing between woofer and tweeter.

The Crossover.

► According to Dynaudio tradition the crossover is designed with 6 dB slope. An allpass circuit avoids interferences between tweeter and woofer. This construction grants an optimum of correct impulse reproduction.
