XENNON 3

Compact physical measurements along with high performance were the goals of this pleasant looking construction.

To reach this target we took into use the recently developed woofer 24 W-100, a vented 9" unit with a huge 4" voice coil. The one mould cone is made of the proven PHA material. In a bass reflex cabinet of 40 - 60 liters (1.4 - 2.1 cu. ft.) the woofer has an ideal impulse response and thanks to its long linear throw it renders an impressive low end pressure.
